MINIATURE CIRCUIT BREAKERS - RI50

MINIATURE CIRCUIT BREAKERS OF RI 50 SERIES 50 ARE USED FOR THE PROTECTION OF INSTALLATIONS AND DEVICES (OVERLOAD AND SHORT CIRCUIT), AND AS A DISCONNECTOR IN CASE OF ELECTRIC SHOCK

BENEFITS

- Due the low permissible I^2t (let through) values can be used smaller size of metal boxes
- Low let-through energy under short-circuit conditions ensures longer life of contacts and reduces thermal stresses in the distribution circuit
- RI 50 reduces the energy loss due to a unique contact configuration and reduction of hot spots. Watt loss per pole for RI 50 is far lower than that specified in IEC/EN 60898
- An optional operating position
- IP20 degree of protection; IP40 degree of protection after installation in a distribution box
- An additional colour indication of the position of main contacts (red: contacts closed; green: contacts open)

TYPES

RI 51	single-pole
RI 51N	single pole + neutral pole

RI60J

Protection of DC circuits

It is possible to use both RI60 and RI60J miniature circuit breakers for protection of DC circuits depending on voltage.

For voltage U_n up to:

- 40 V d.c. use miniature circuit breakers RI60. Source poles (+) and (-) can be connected to the circuit breaker terminals arbitrarily.
- 220 V d.c. or 440 V d.c., use miniature circuit breakers RI61J or RI62J. As these miniature circuit breakers are equipped with permanent magnets, source poles (+) and (-) must be connected to identically marked terminals of the circuit breakers (see connection example).

SHUNT TRIP VC

Instructions guide for the mounting of a shunt trip VC-PR 60

- on right side of all executions RI60, RI60J, PRe 60 and modular switches RV 60
- circuit breaker and shunt trip have to be in switch-off position
- insert pin $\varnothing 1,6$ mm into aperture of operating lever and into aperture of switching system $\varnothing 1,2$ mm (pins are part of delivery)
- approach shunt trip to the circuit breaker in order to achieve engagement of pins into appropriate parts of circuit breaker and switching system of VC
- into free holes in shunt trip VC enter stainless steel screws and slightly tight the screws to attach it to the RI60
- check the function of VC with RI60 by switching on the the MCB and pushing the mechanism through the hole for pin $\varnothing 1,2$ mm with appropriate tool.
