

eMIS
Digitalization

eMIS | eMIS

eMIS | eMIS – „Digitalization of processes“

eMis is „Front-end“ web base user platform for **Digitalization of processes**, providing monitoring of data, business processes, energy consumption, activity tracking with functionality for data analysis, who are key for **monitoring, control, decision making and management**.

*Business processes are improving if we **measure** them, **analyze**, **monitor** them and taking **actions**.*

MEASUREMENT + ANALYSIS + KEY PARAMETERS MONITORING = **EFFECTIVNESS and SAVINGS**
DIGITALIZATION

eMis solutions covers all phases for **easy, fast, user-friendly** and **effective decision making** for **monitoring** and **improvements** of business processes.

„Don't work harder, work smarter“

eMIS | eMIS

Main characteristic and advantage of eMis is flexibility – it collects, monitoring and analyzing data from all possible sources.

Based on experience of Iskra d.d., eMis module is built as application with predefined types of functionality, solutions and options depends of application and costumer needs.
eMis allows any custom made solution on request.

Users of eMis are depending of application.

Energy management: general manager, production manager, energy manager and maintenance manager

eBilling: manager and subcontractors

eProduction: manager, manager of work processes, production worker,...

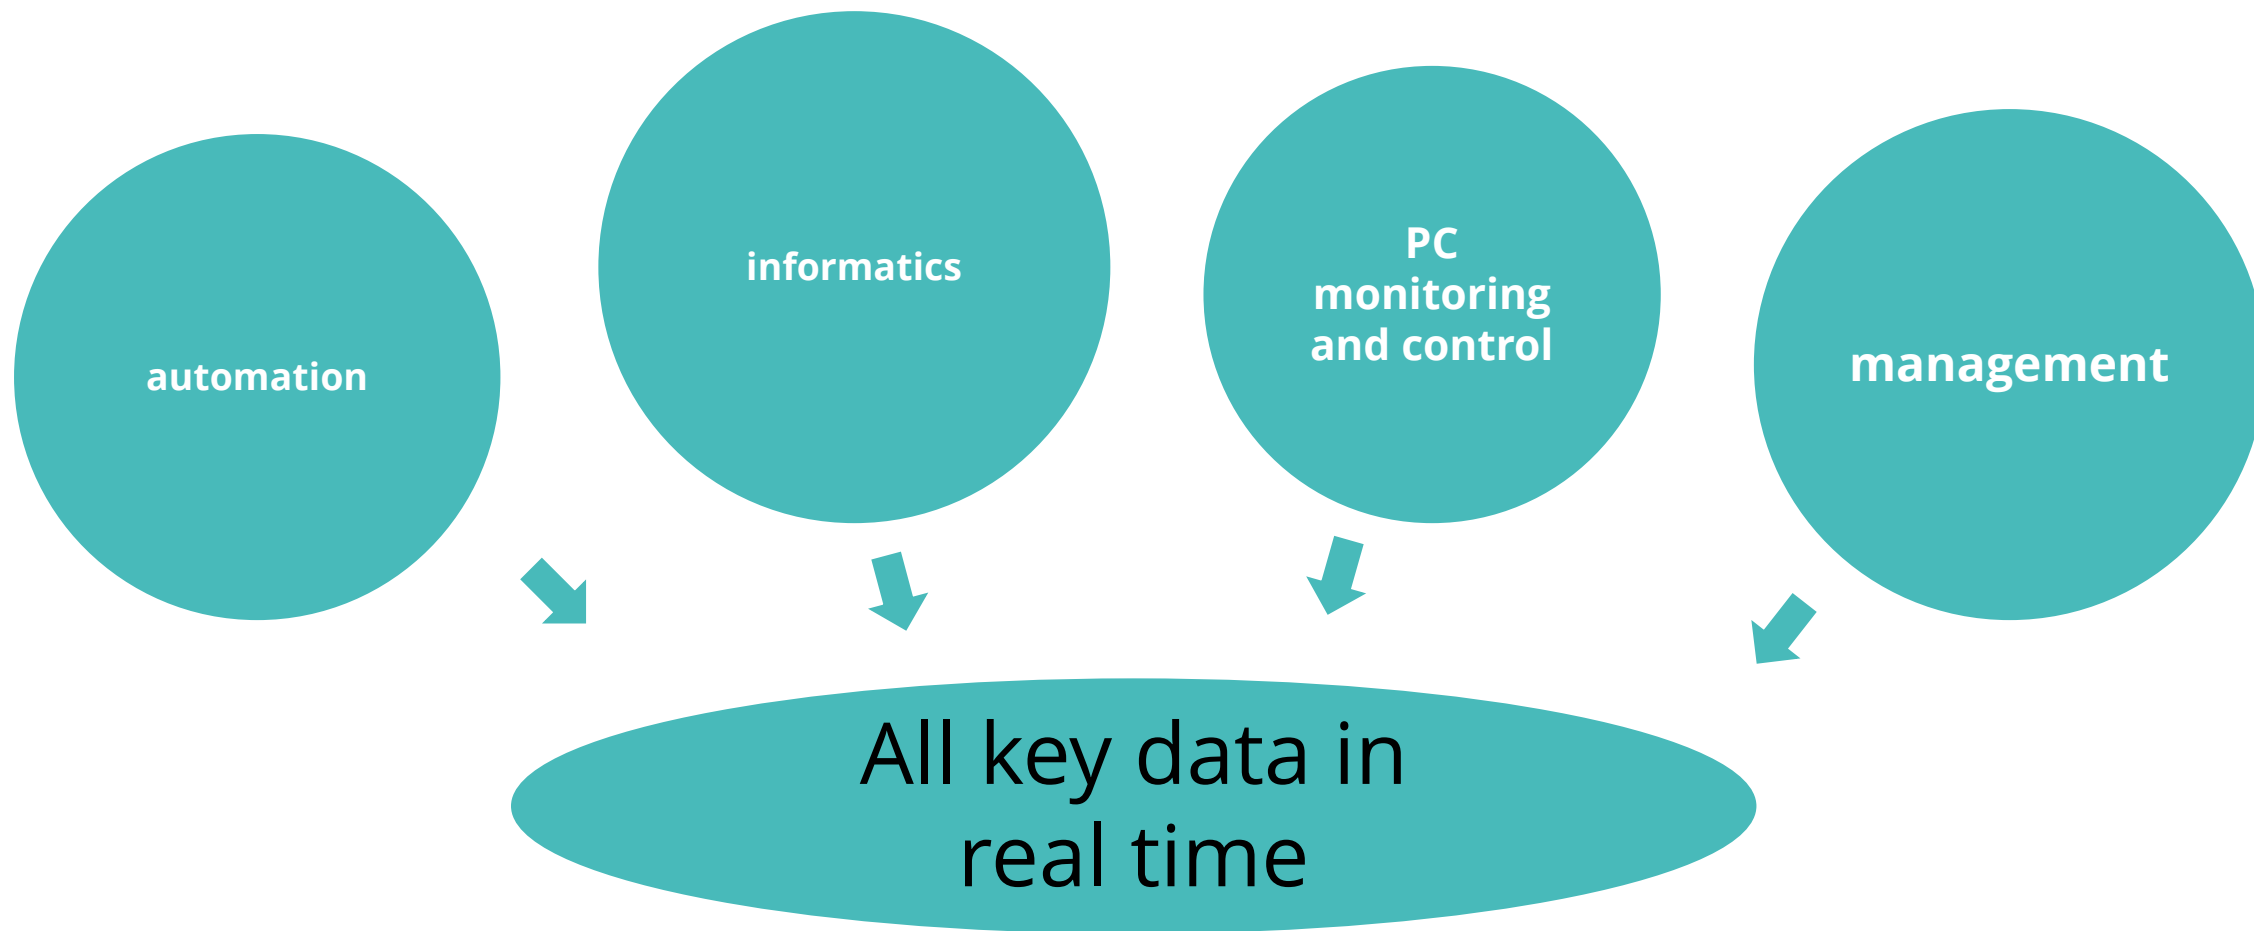

eSmart Grid: engineer

eLogis: Head of R&D, Head of research group, researchers

Custom made application: customer specify with support of Iskra

User access is specified with right, who are managed by power/admin user or Iskra d.d.

eMIS | web platform providing

eMIS | Web user platform

requirements:

access to VPN connection for security reasons
usage of standard web browsers

Highly recommending Google Chrome, as best browser for long-term use

program language:

Smalltalk

web interface:

Isomorphic SmartClient JavaScript framework

data base:

Oracle

eMIS | Computer platform

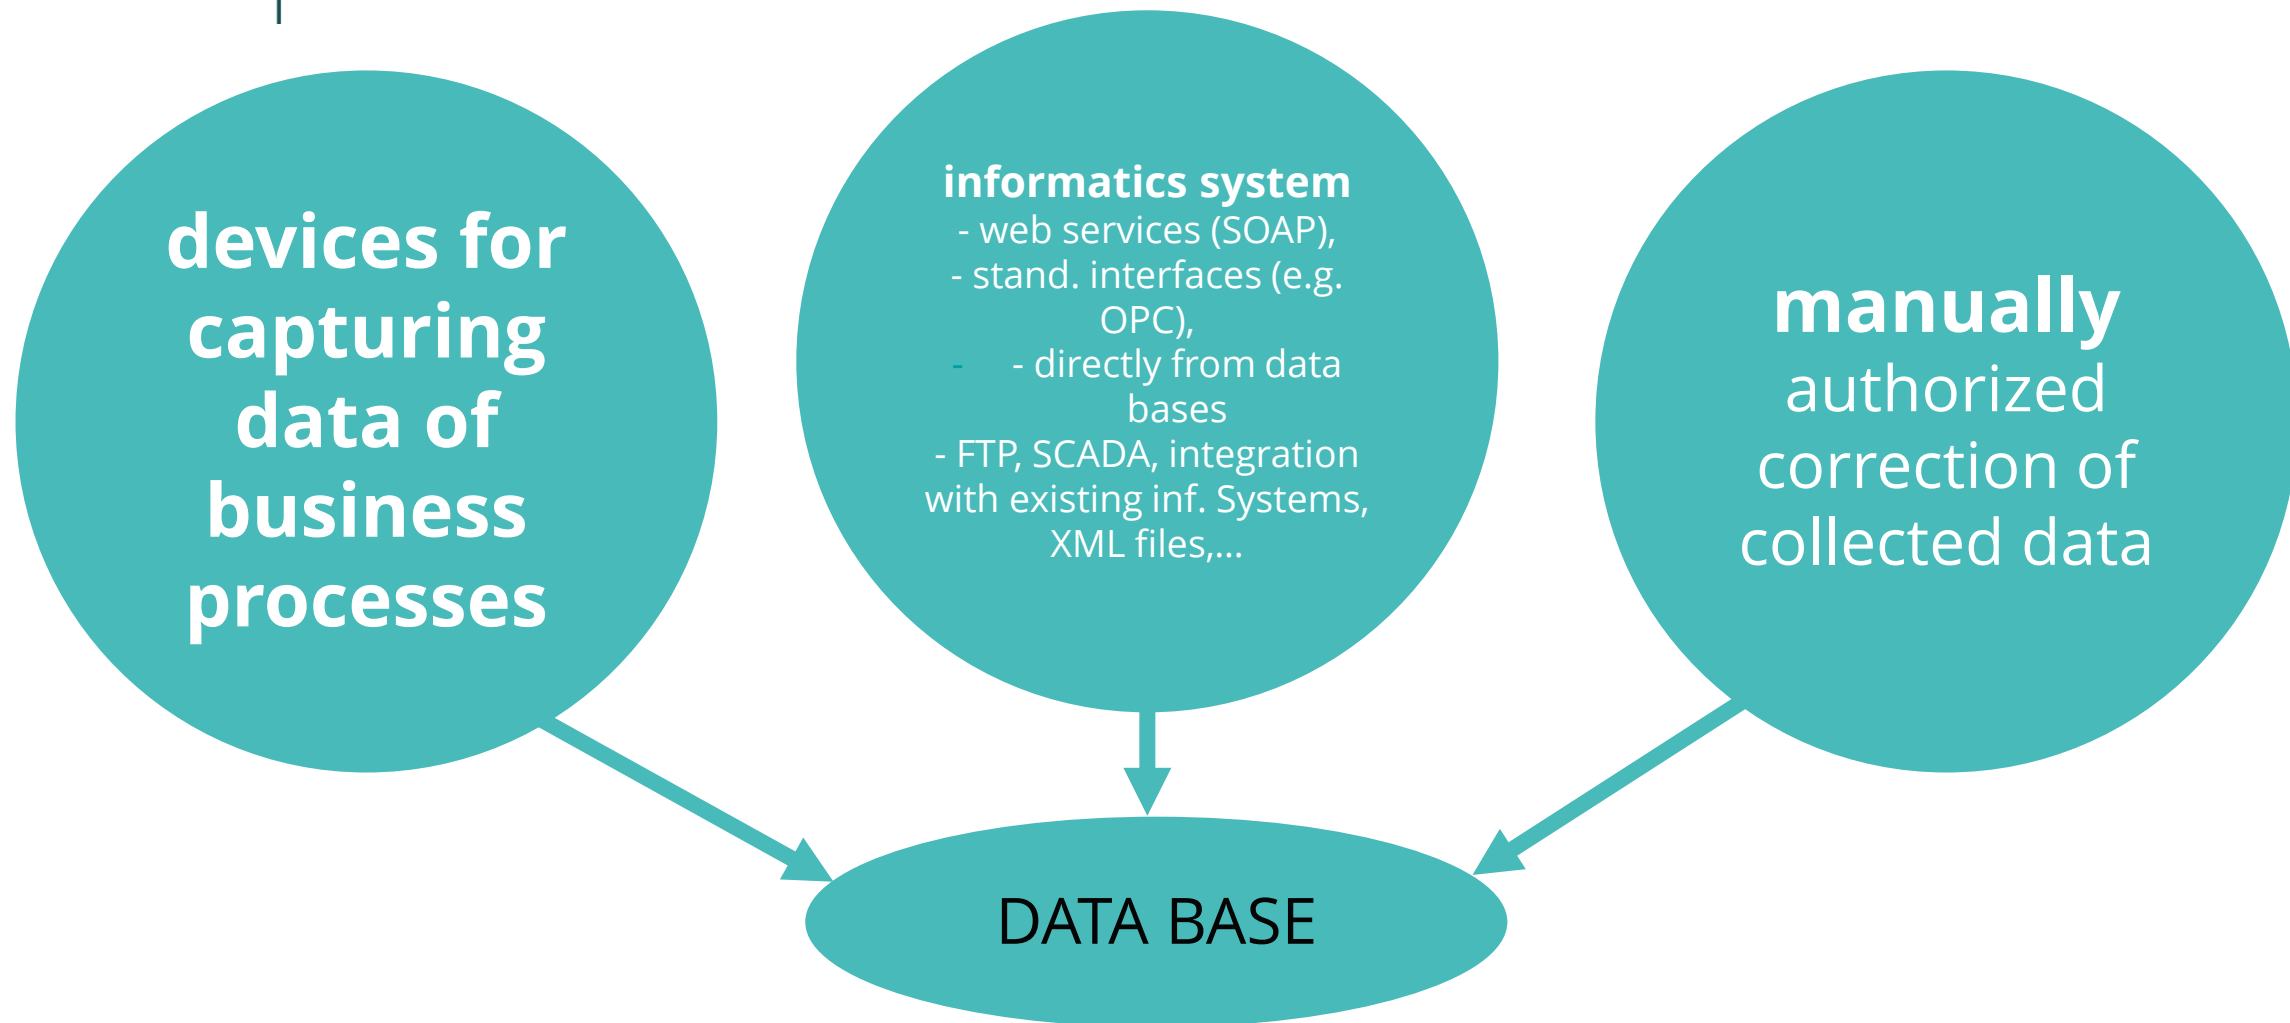

Server

requirements: own hardware equipment or cloud base solution
location: 2 CPU Xenon platform
minimum 16 GB RAM
1 TB disc for data (depending of a project)
recommended at least RAID 0 disc configuration

Work stations

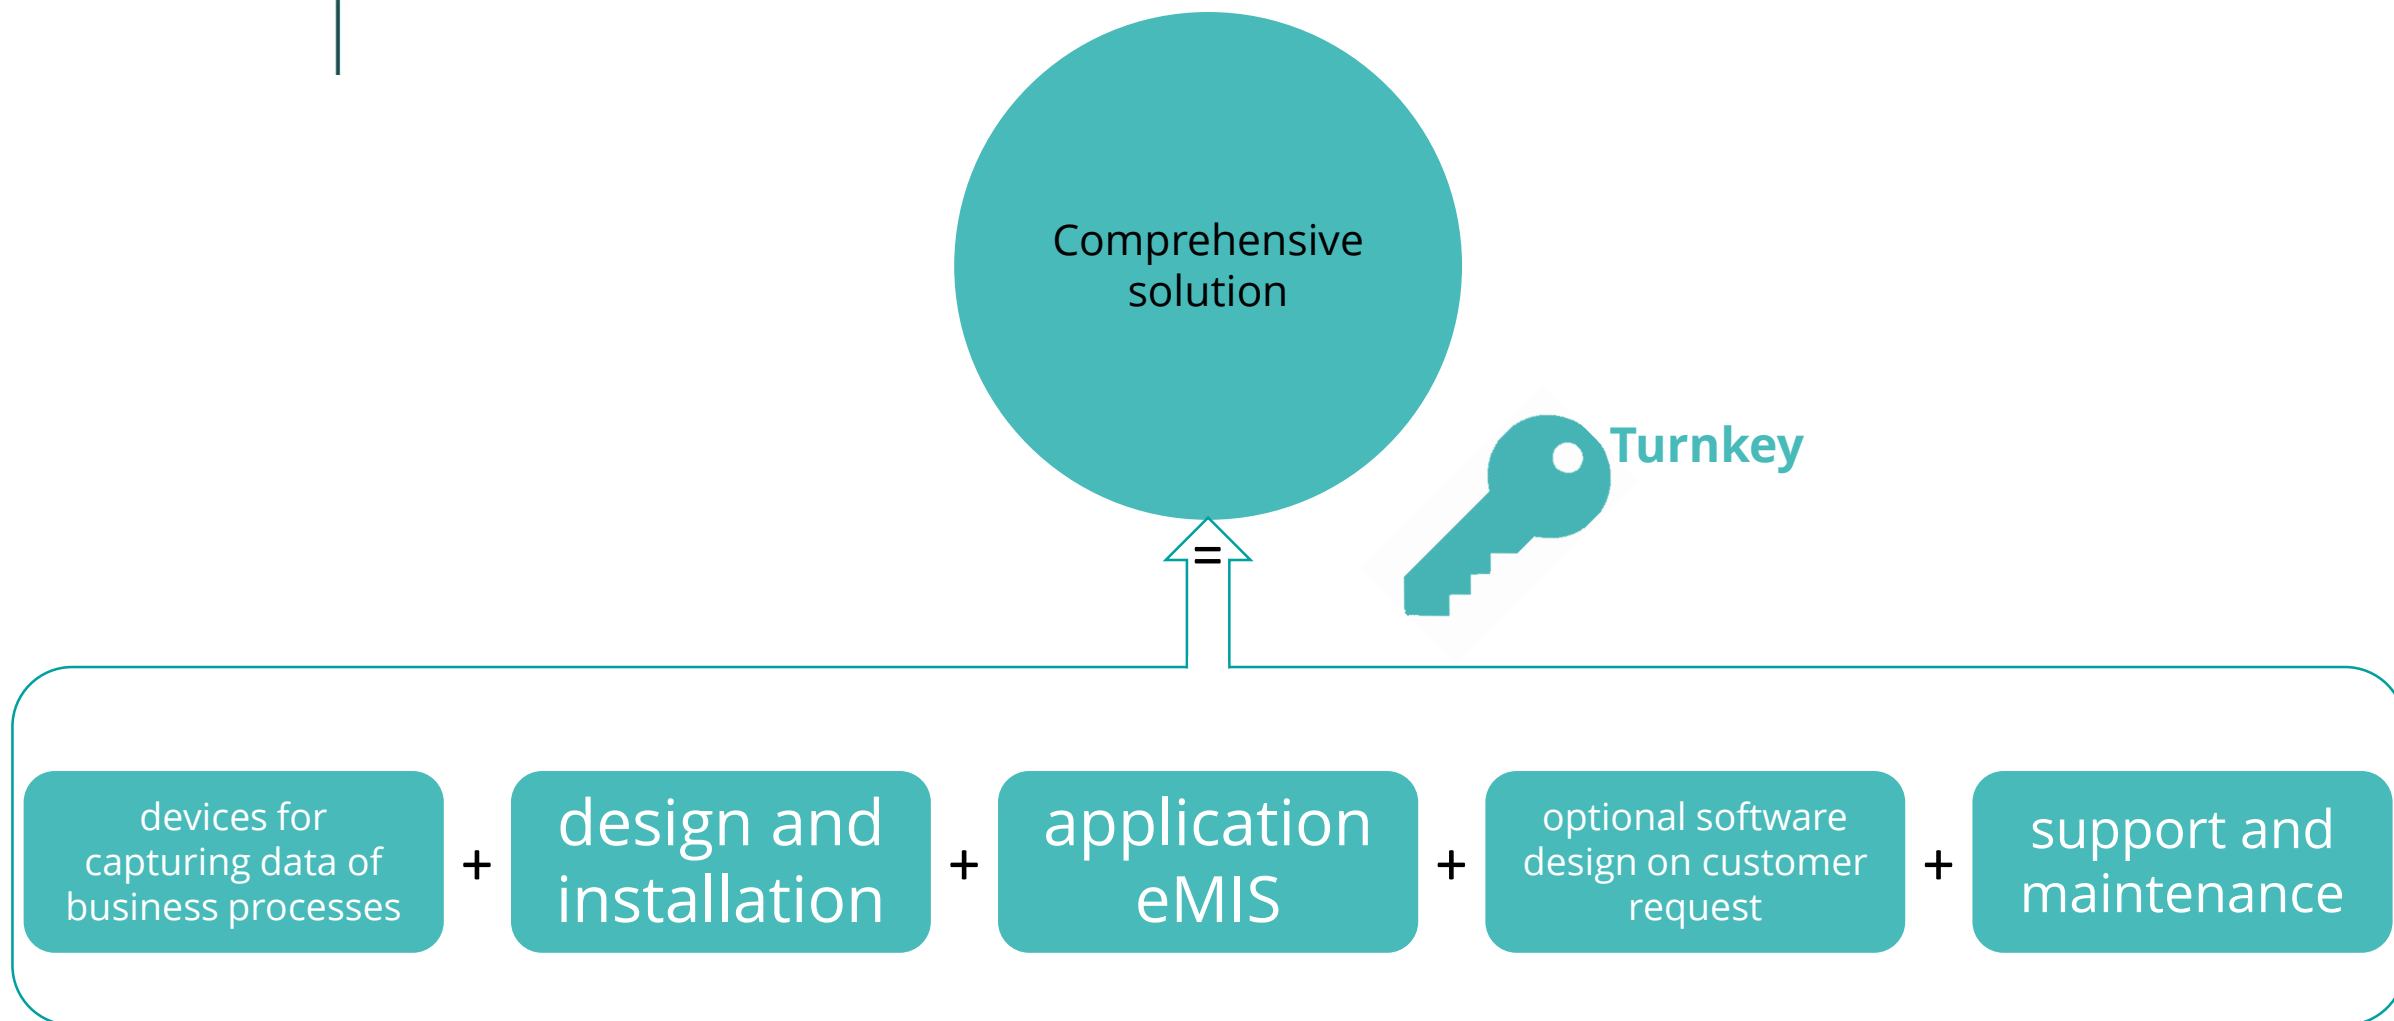

hardware: Standard office computer with minimum 4GB RAM
software: OS: Windows server 2016 or newer, Unix, SUN-Solaris,...

eMIS | Data capture

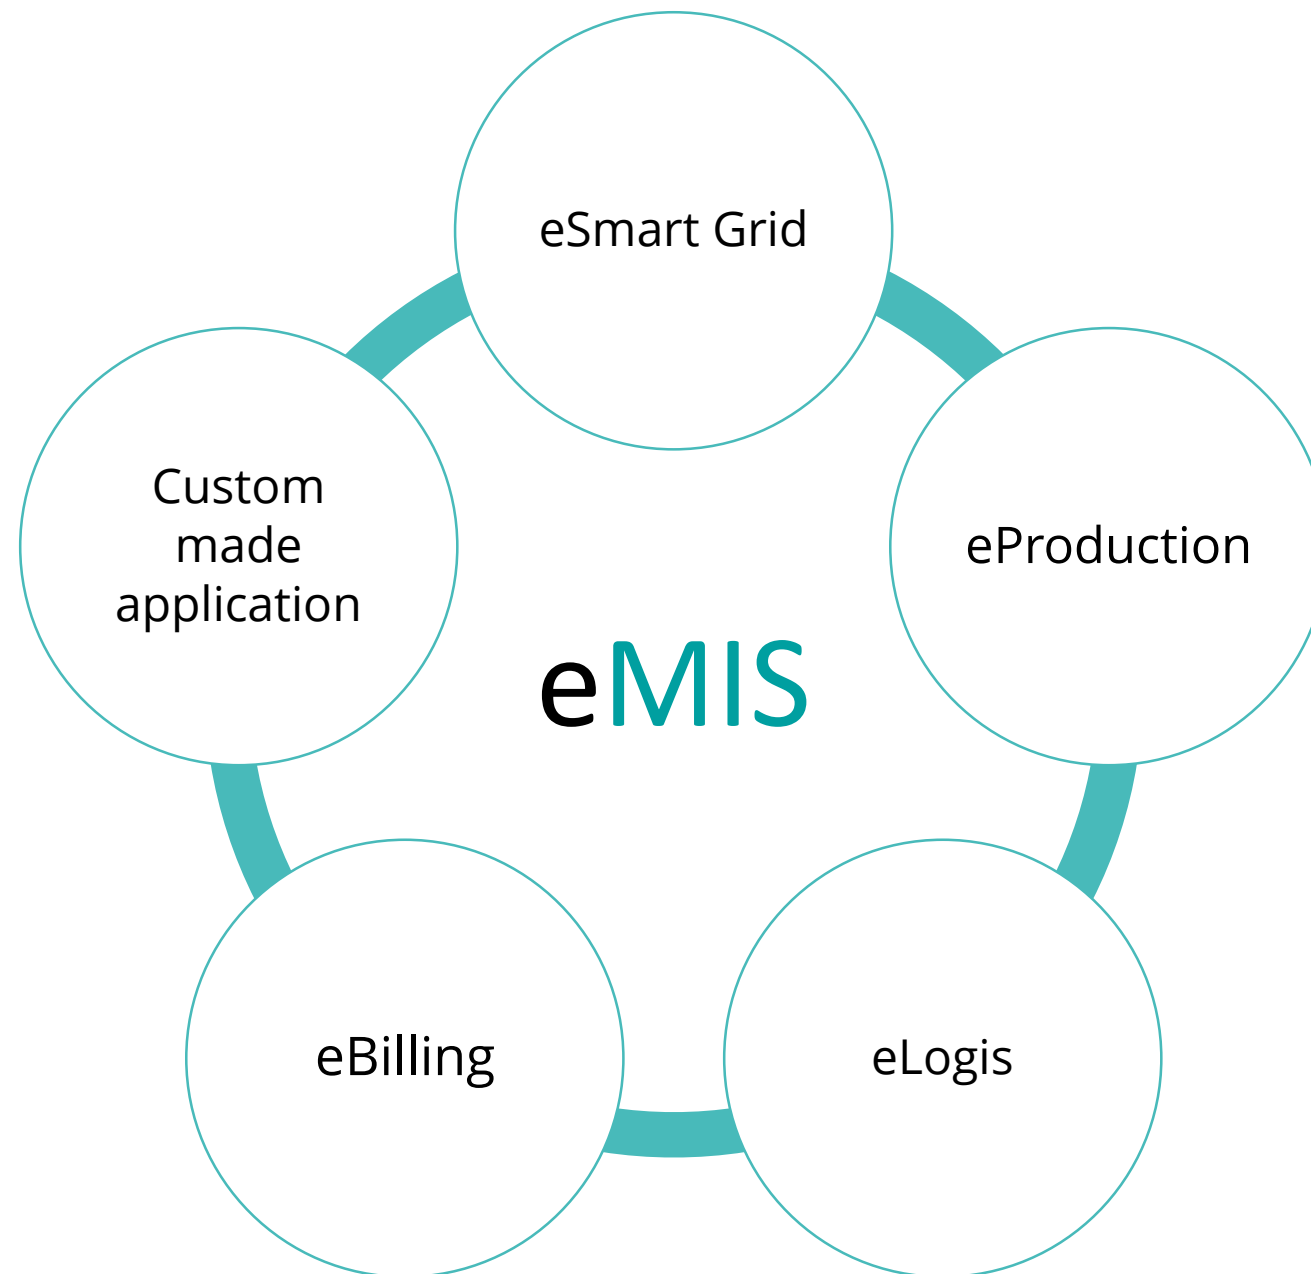

eMIS

ISKRA turnkey solution

eMIS

eMIS | eSmart Grid

Remote control of grid parameters

Control and Management of equipment

Identification of electricity theft

LV and MV custom smart solutions

Monitor and Control of Power Quality

Reports

Detection of interventions into grid

Alarms

Savings, optimized, improved reaction time and Power Quality

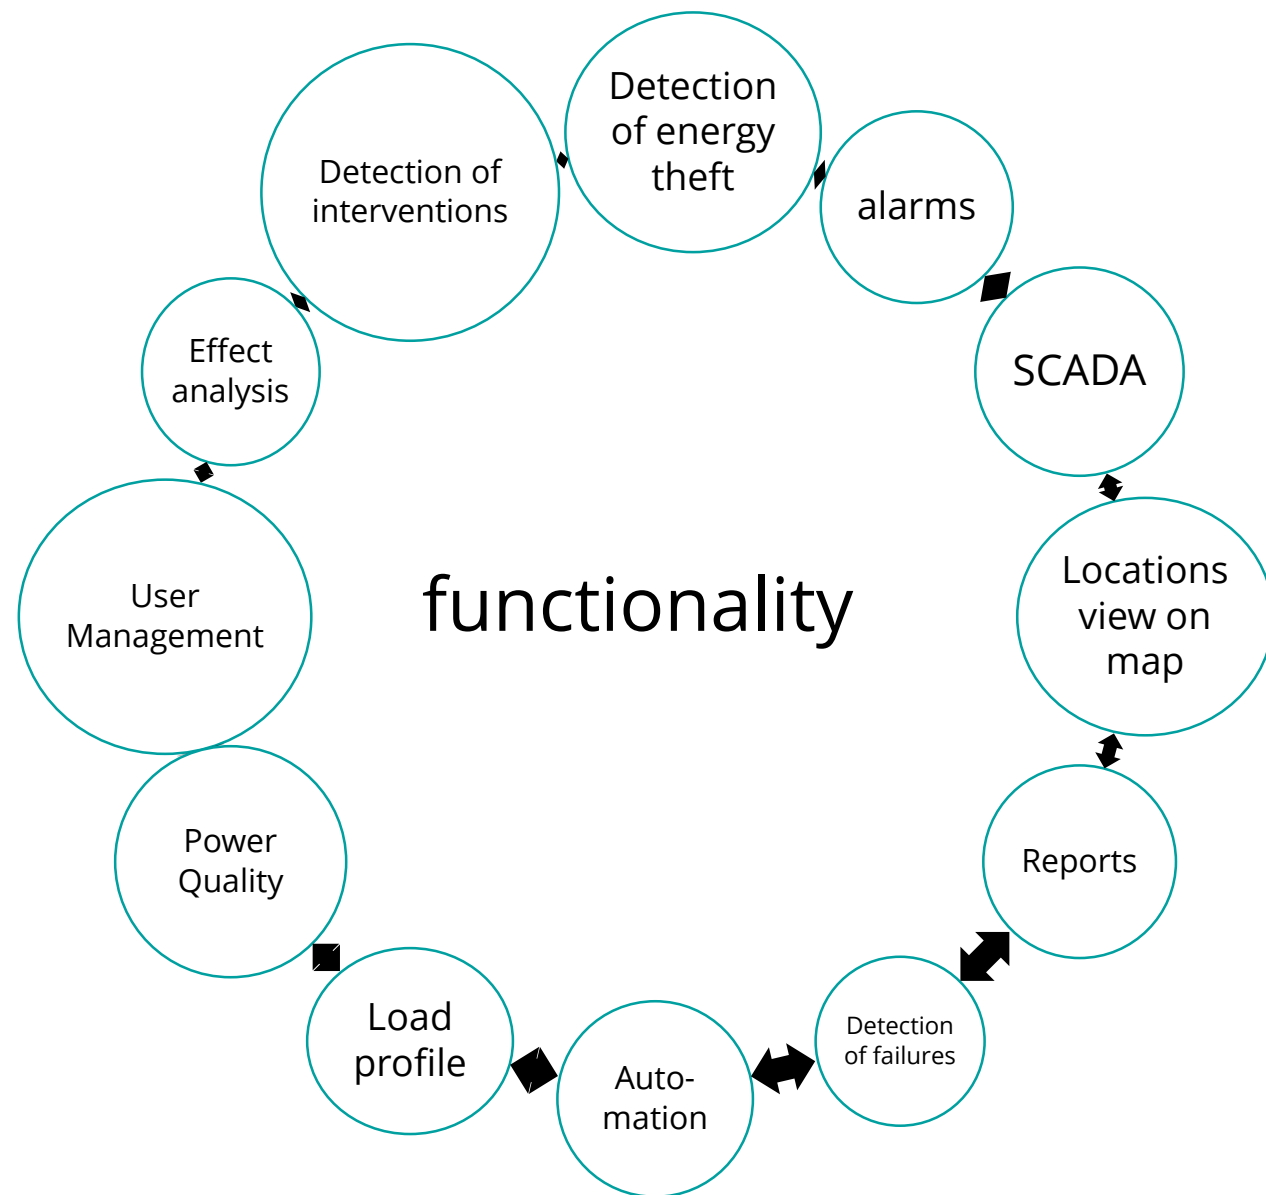

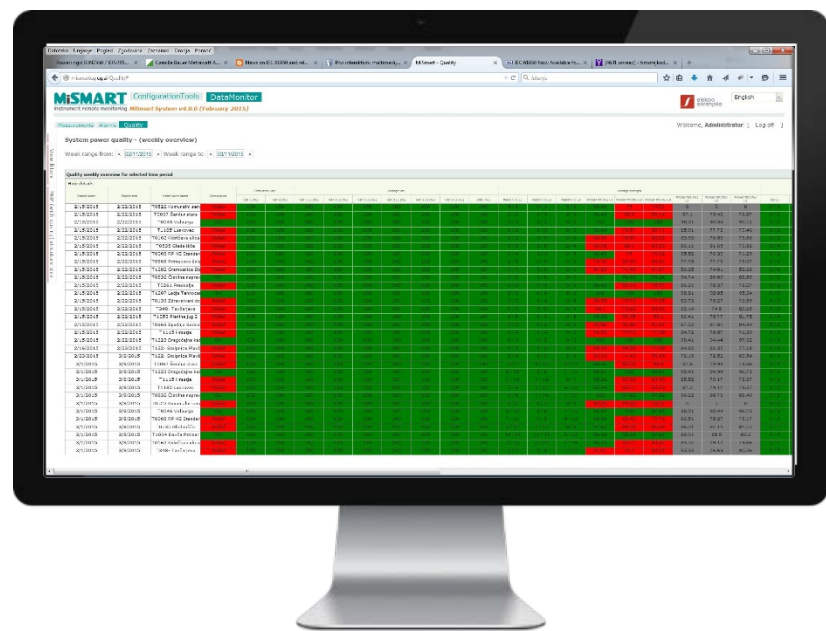

Efficient business

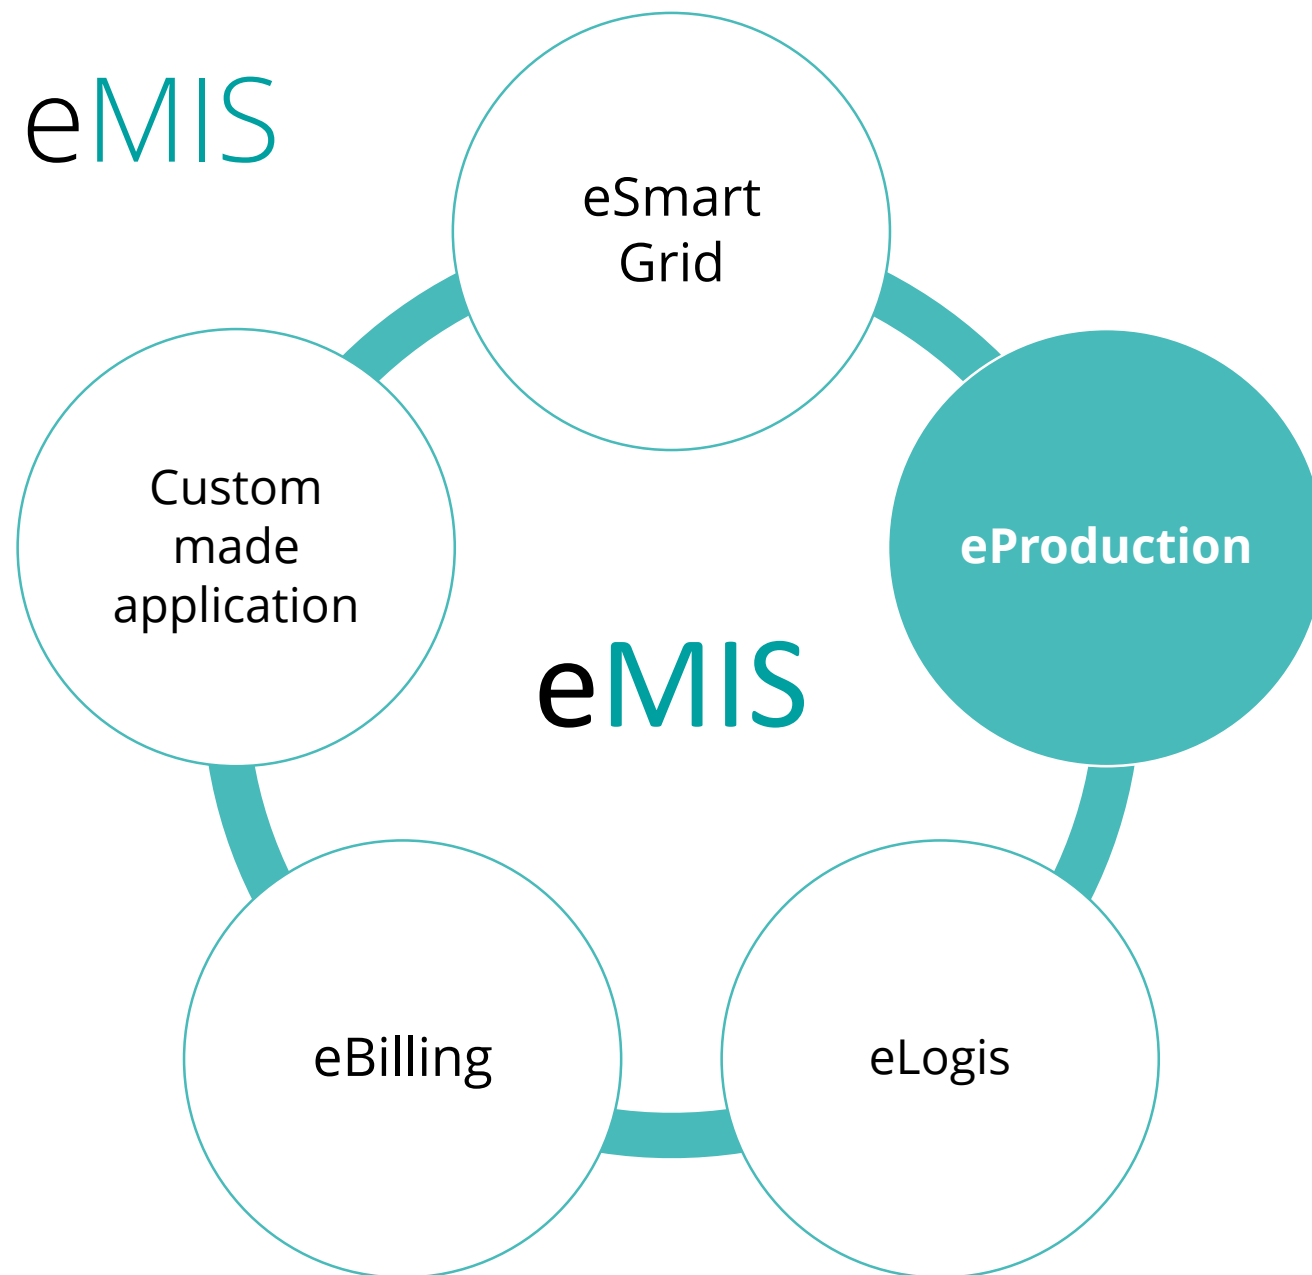

Increased competitiveness

eMIS | eSmart Grid

eMIS | Applications eMIS

eMIS | eProduction

Digitalization of business processes

Production Monitoring and Control

Production lines Monitoring and Control

Bottleneck detection

„down-time“ of machines detections

Business processes optimization

Manufactured products counting

Comparison of Realized vs. Planned

Digitalization of energy consummation

Increased **efficiency** of business processes

Impact on:

manufactured **quantity**,

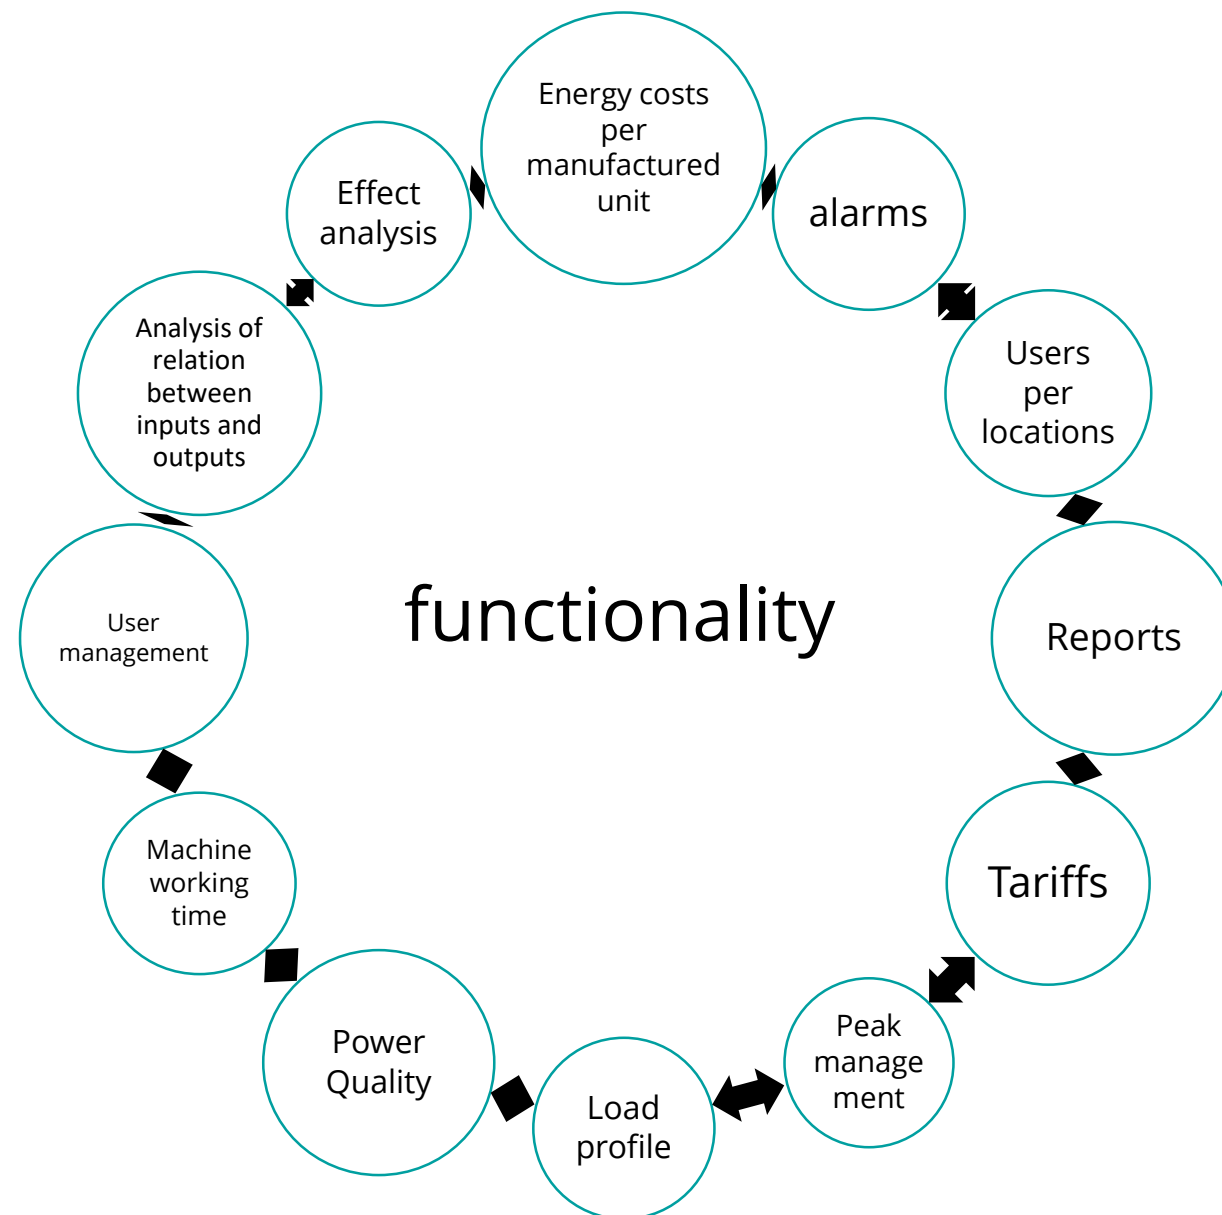

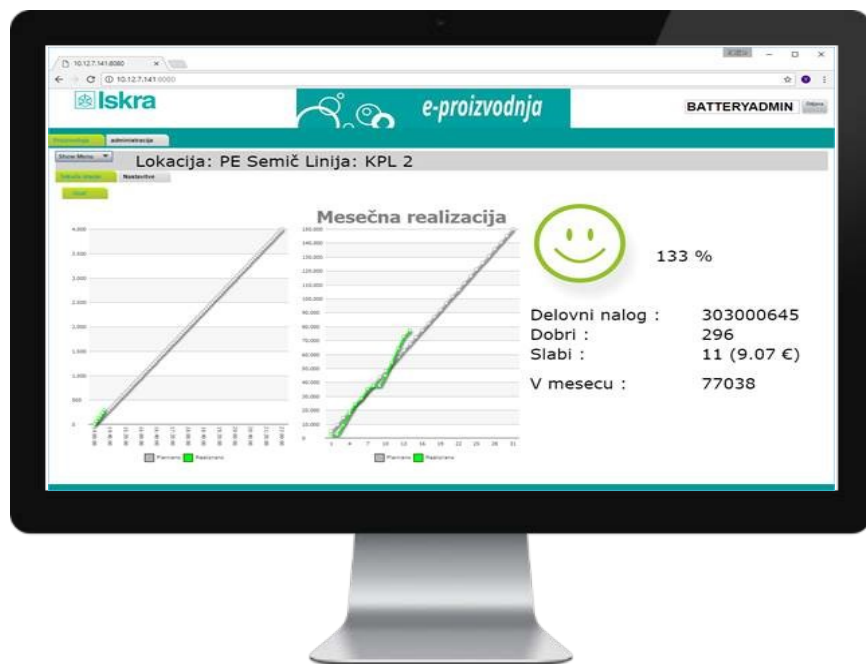

Quality of products,

employee **satisfaction**

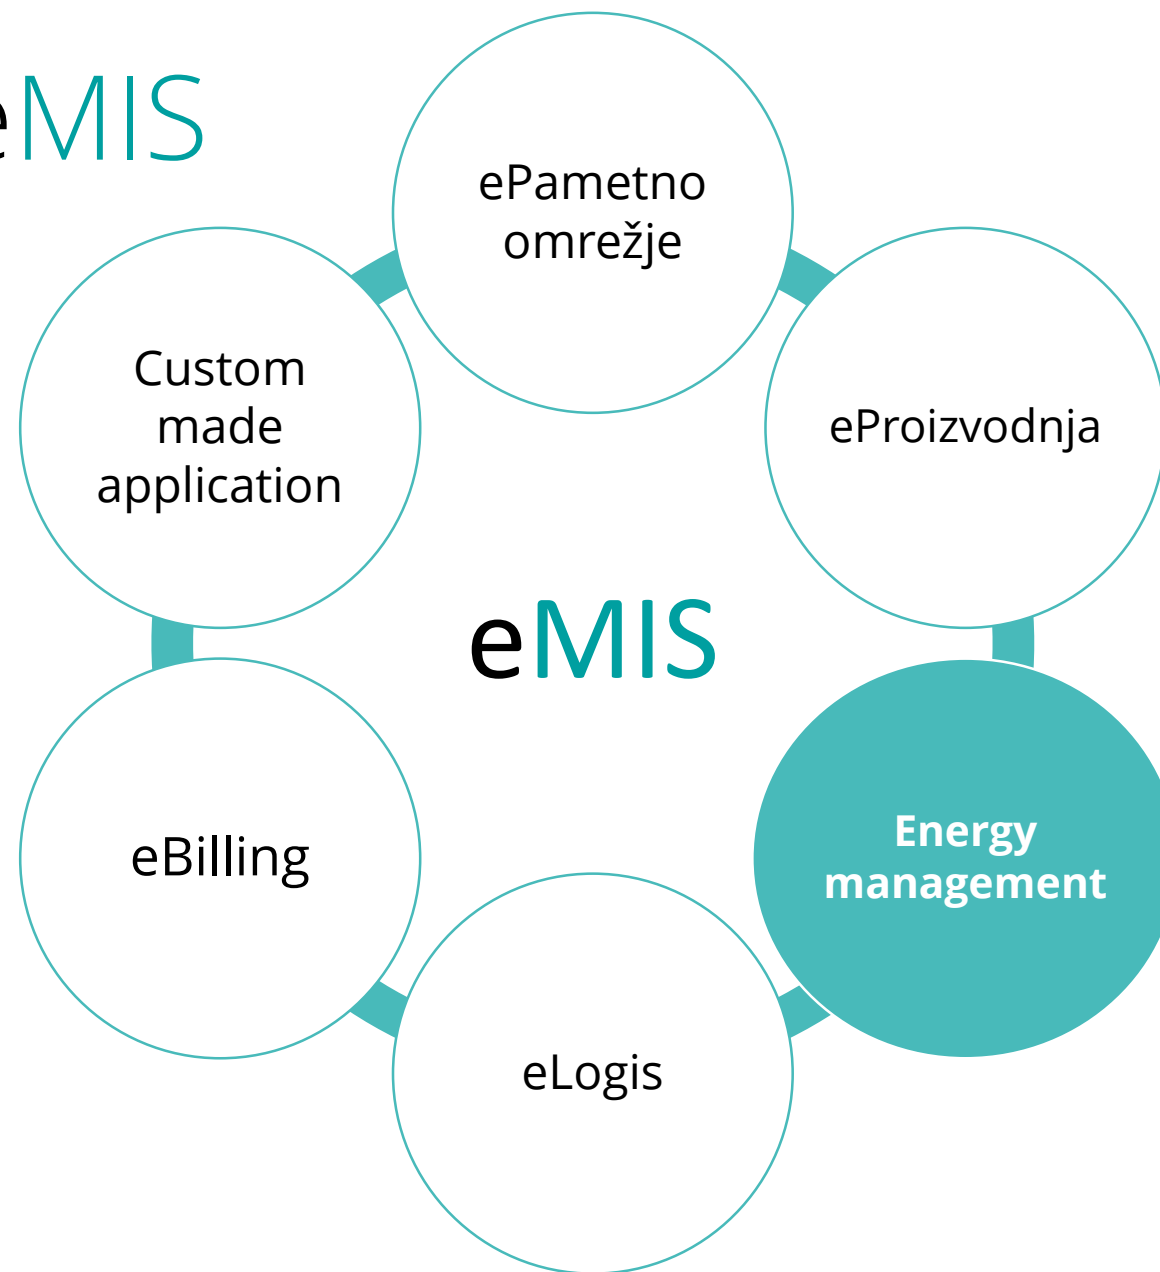

Evaluation of energy costs per **manufactured unit**

Increased efficiency

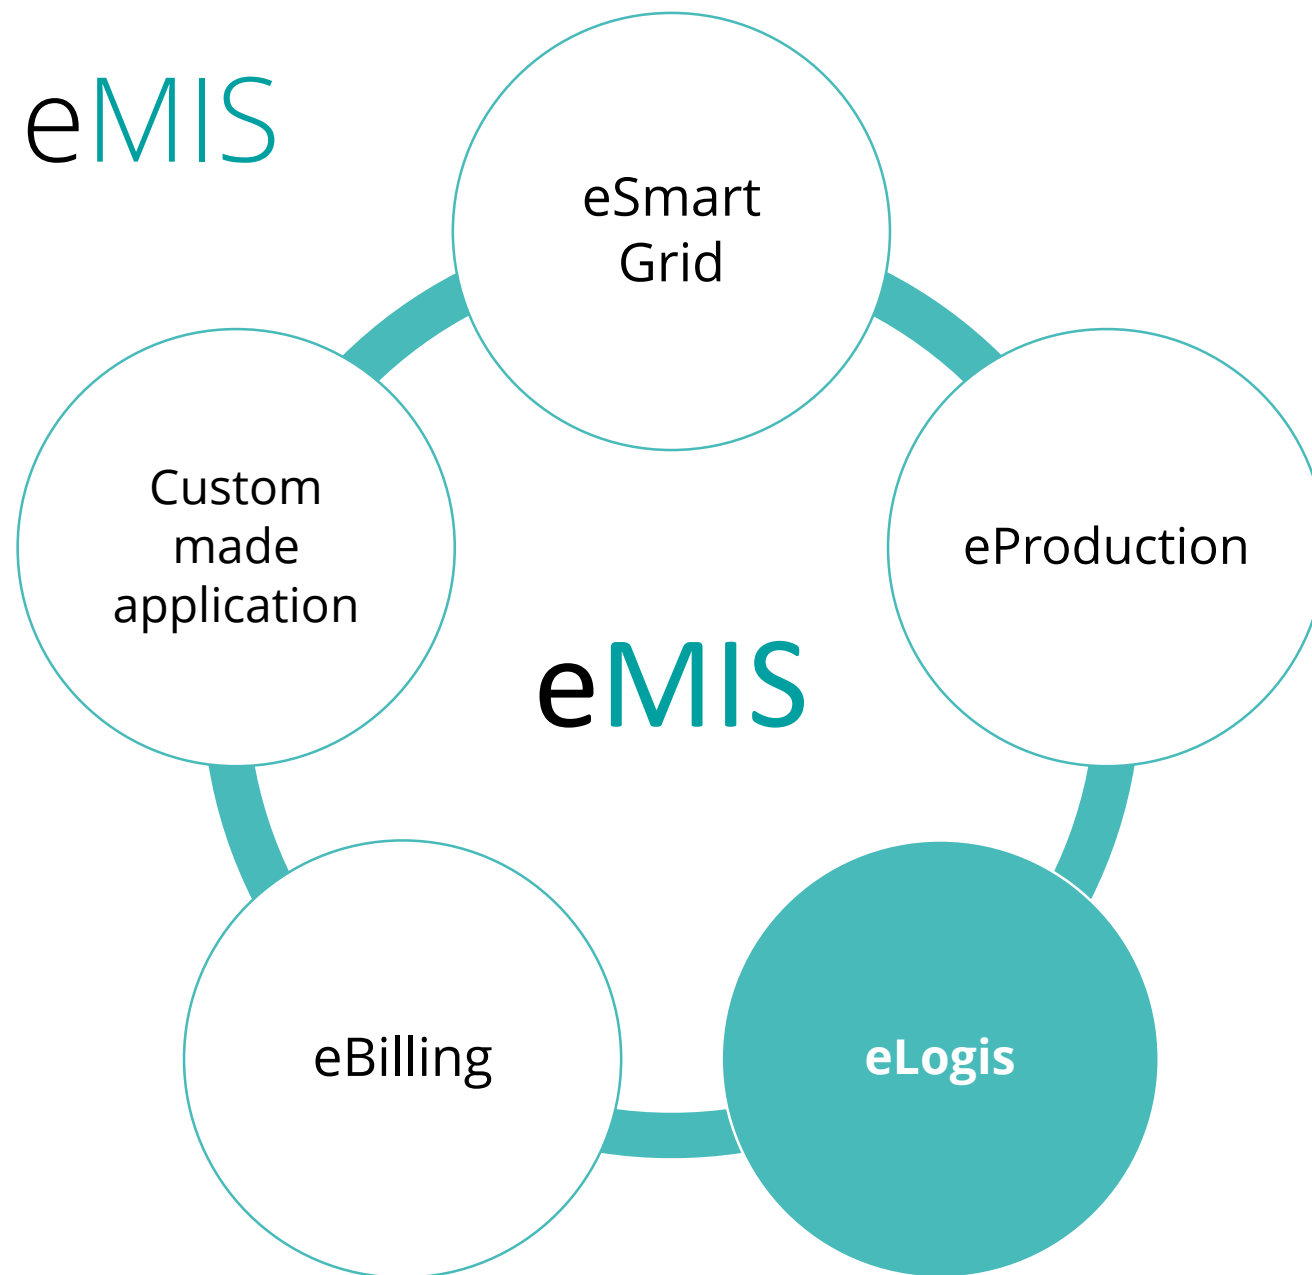

eMIS | eProduction

eMIS Applications eMIS

eMIS Applications eMIS

eMIS | eLogis

Sample control

Digital recording

Control of research processes

Research process tracking

Sample stock preview

Reports

Sample and development **Control and record **Tracking****

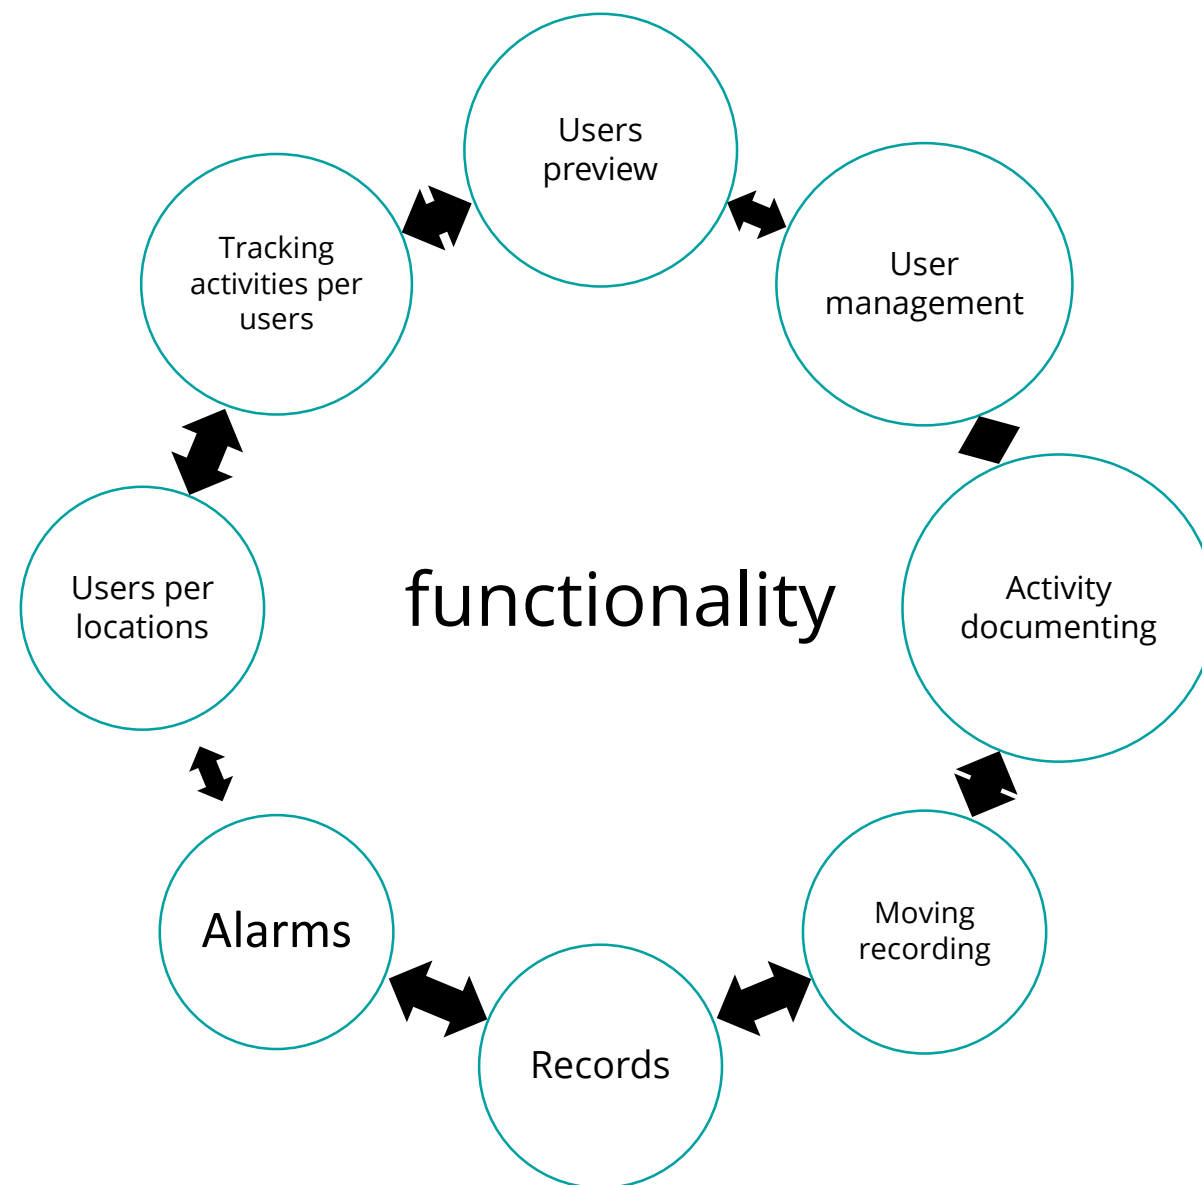

Automatic **documenting of processes**

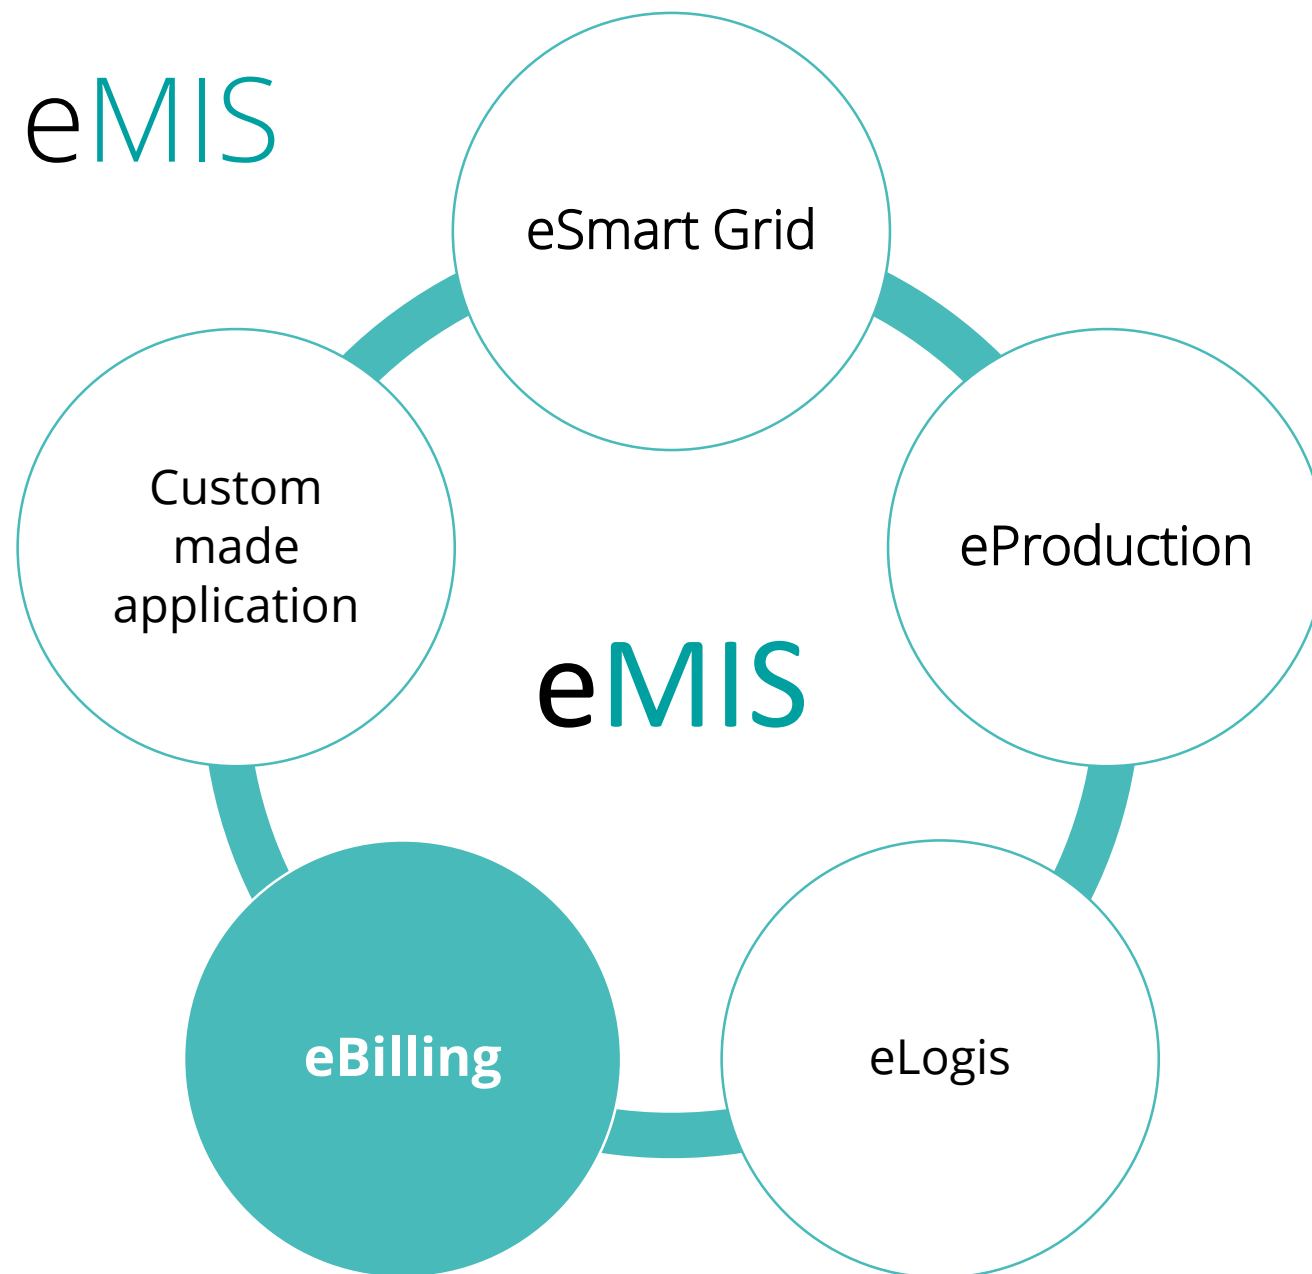

Efficient **business**

eMIS | eLogis

eMIS | Applications eMIS

eMIS | eBilling

Detection of consumers

Energy bill parameters including

Tracking actual consumption

Evaluation according to tariffs

Issue a billings

Billing issuing of actual consumption with included all necessary energy parameter, taxes,...

Transparent invoicing of energy consummation

Increasing competitiveness

eMIS

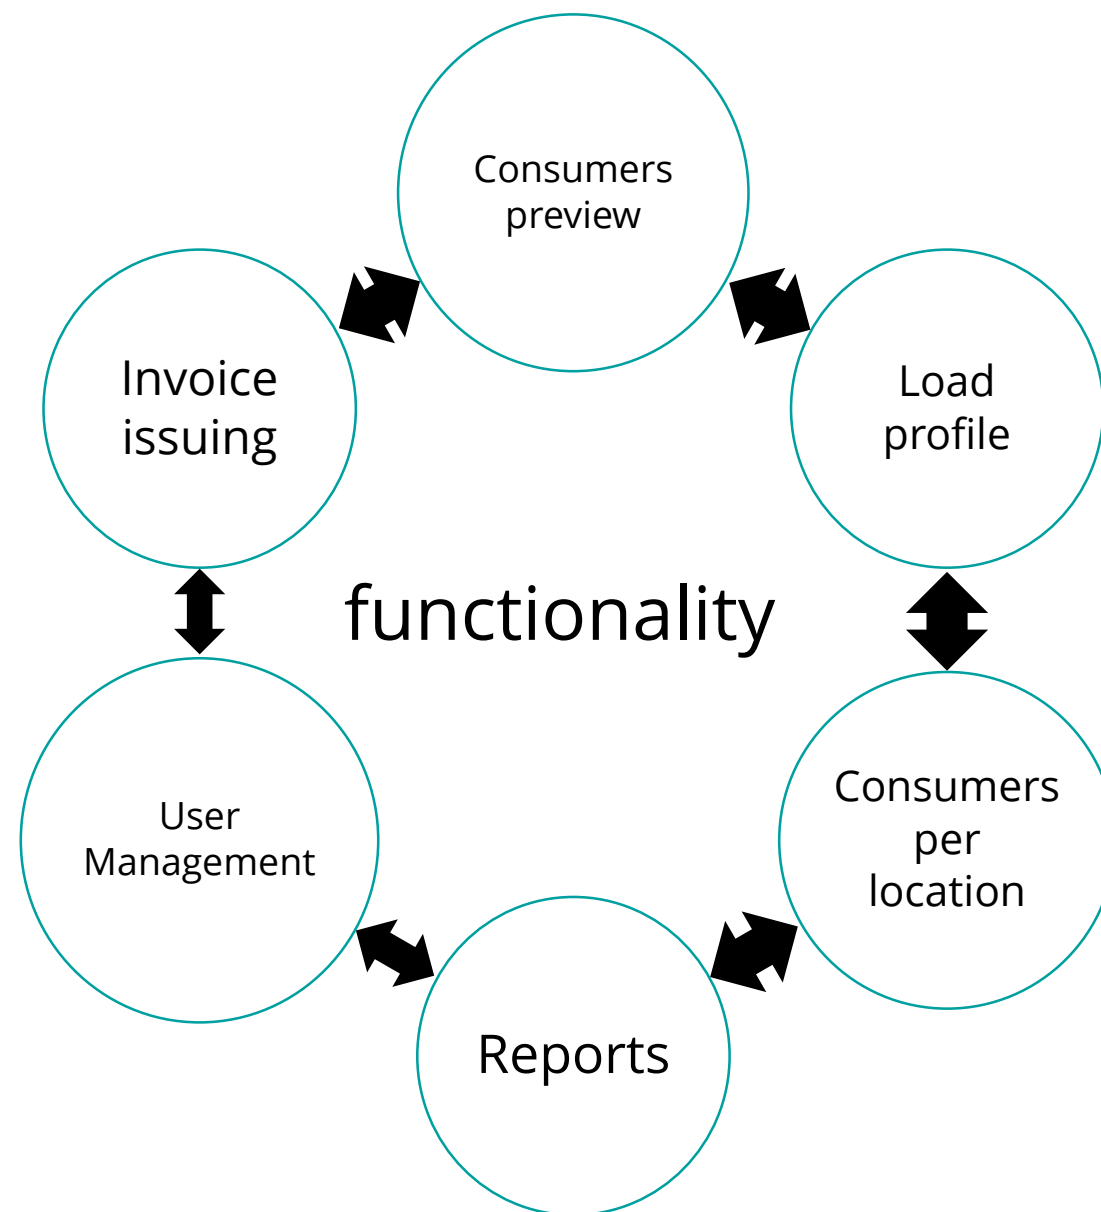

eBilling

eMIS Applications eMIS

eMIS | Why eMIS?

Savings

Improved
business
results, efficient
processes,
increased
efficiency

Planning and forecasting

accuracy at delivery
time
purchase orders
Predictability of
processes
Lower business costs
realization

Control

Control of
processes
increasing quality
Elimination of
bottlenecks
Elimination of
failures
Control of energy
costs

eMIS | Brief

Multi functionality

Collecting key data, who are different with application, allowing decision making based on real and verifiable results
