Family of multifunctional numerical relays

■ FPC 400 is a family of current and voltage digital protection relays with easy to use interface meant for variety of solutions in industry and power distribution.

■ Its robust design enables it to be placed in demanding industrial environments.

■ Setting can be done completely through user friendly local display unit. User experience is enhanced through new edition of interface software MiQen featuring real-time display of measurements, statuses and event recorder.

■ Transferring settings between different devices has never been easier thanks to special front panel USB port. Same settings are simply transferred from one device to another using USB stick which can also be used to save fault recordings, counters and update firmware.

■ FPC 400 can be expanded using external module EX408 for up to 8 temperature sensors.

■ FPC 400 is a member of NEO3000® Substation system and can be integrated to any other new or existing substation or automation.
