PROPERTIES

- For measurement of DC currents and voltages
- Linear scale
- Good read-out survey on larger distance
- Moving-coil Panel instruments with exchangeable scales
- Resistance to mechanical vibrations
- Protective cover for terminals (optional)

APPLICATION

These instruments are designed for mounting into supervision panels of power distribution or transformer stations where D.C. current and voltage measuring instrument is required.

CONSTRUCTION

The measuring system includes a core magnet, which is insensitive to external fields. The moving-coil is mounted on spring bearings, therefore the measuring system is highly resistive to mechanical shocks and vibrations. The scale graduation is practically linear throughout the whole range.

Special instrument design enables quick replacement of the scale both in case of a new or an already used instrument. This is especially suitable for instruments that are connected to a transducers with standard type current output or to separate shunts with rated voltage drop (e.g. 60 mV).

THE EXCHANGEABLE SCALE HAS A NUMBER OF ADVANTAGES:

- quick and simple adaptation of the instrument to variable user technical requirements
- shorter delivery time
- allows flexible planning

SHIP'S VERSION

Special versions are available for panel mounting into ships. These are mechanically resistant and additionally sealed instruments which comply with the requirements of Lloyd registers. The instrument case is marked by an anchor: ⚓ and a capital letter L at the end of the type designation. (e.g. BQ0207L)

¹⁾ For assembly BQ0507 rail mounting according to DIN 46277 and EN 50022. Bezel measures are 45x45 mm. Technical data are the same as for BQ0407.

²⁾ At reference conditions for size 96x96 (BQ0207) and 144x144 mm (BQ0107) only.

EXCHANGING OF SCALES

Press the cover, on top of the instrument, in the direction of the arrow and extract the scale with a suitable tool. After exchanging the scale, carefully close the opening with the cover.

The instrument must be disconnected during the dial exchange procedure.
